SUMMARY

Software Engineer with experience in building high-performance e-commerce applications using **ReactJS**, **TypeScript**, and **Node.js**, specializing in checkout systems, **accessibility**, frontend performance, and cross-functional delivery.

EXPERIENCE

Software Engineer IV | Purple Innovation LLC | Lehi, Utah | February 2021 - January 2026

- Facilitated cross-functional **collaboration** and **communication** while spearheading product engineering initiatives for a high-traffic e-commerce platform over five years.
- Directed **UI/UX** projects, employing **React**, **JavaScript**, **TypeScript**, **RESTful APIs**, and **Node.js** to deliver 20+ REST endpoints and optimize frontend-backend workflows, achieving a 25% increase in platform performance.
- Enhanced **user experience** for purple.com's by deploying React, MUI X, and Figma to redesign 30+ UI workflows, resulting in a 22% increase in customer satisfaction and a 28% reduction in user-reported issues.
- Adopted **Agile Practices** and participated in bi-weekly **scrum sprint meetings**, **daily stand-up**, leveraging **React**, **AWS**, and **Jira** to contribute to the timely delivery of 250+ features per roadmap, maintaining over 95% sprint completion rate.
- Implemented unit testing using Jest for 30+ UI workflows, enhancing test coverage by 40% and reducing regression defects by 18% per release cycle.
- Managed deployment support for 100+ feature releases over 5 years using **AWS CloudWatch**, Opsgenie, and GitHub Actions, sustaining above 99.9% uptime and expediting issue resolution within SLA targets.
- Designed and implemented serverless microservices using **AWS Lambda**, **API Gateway**, and **SQS**, enabling event-driven, decoupled architectures that improved system scalability and reduced operational overhead.
- Implemented **Test Driven Development practices** using **Jest** across 250+ feature sprint cycles over 5 years, increasing defect discovery during development by 30% and supporting sustained reduction in regression issues for major releases.
- Developed and maintained 100+ reusable **React components** for dynamic e-commerce modules, leveraging **React Hooks** and **Context API** to accelerate UI development, enhance scalability, and maintain consistency across 30+ production workflows.
- Engineered robust **React state management** using **Context API** and **Redux Toolkit** across 30+ production workflows, accelerating state synchronization and improving UI responsiveness, as measured by a 22% drop in user latency incidents.

Freelance Software Consultant | PeoplePerHour.com | April 2013 - March 2016

- Directed user research initiatives across 12 client projects over 3 years, utilizing peoplePerHour to inform **requirements gathering** and prioritize feature development, directly influencing an increase in end-user satisfaction scores.
- Provided ongoing technical advisory and implementation support on a weekly basis for 12+ clients over 3 years through peoplePerHour.com, achieving a reduction in project **delivery time** while ensuring continuous alignment with evolving client requirements.
- Managed the role of **technical owner** for 10+ mid-scale SaaS projects over a 36-month engagement via peoplePerHour.com, overseeing end-to-end technical delivery using Jira and GitHub to consistently meet 98% on-time milestones and client satisfaction KPIs.

Software Engineer | Armia Systems Inc | Cochin, India | March 2011 - April 2013

- Developed and customized 5+ **e-commerce products** and 10+ customizations with integrated **RESTful APIs** for payment processing.
- Enhanced codebase maintainability and scalability by refactoring legacy modules, introducing reusable components, and adopting modular architecture patterns.
- Partnered with QA teams to identify and fix 100+ bugs, improving overall product stability.
- Managed **troubleshooting** workflows for complex production incidents spanning 24 months, resolve 97% of P1/P2 tickets within SLA, and maintain robust application health across deployments.

EDUCATION

Bachelor of Technology in Computer Science & Engineering | University of Calicut | Kerala, India

SKILLS

React, JavaScript (ES6+), **TypeScript**, **Redux**, **Hooks**, **Context API**, HTML5, CSS3, Figma, Component Architecture, , **Performance Optimization**, Node.js, REST APIs, Accessibility, ARIA, **AWS Lambda**, **API Gateway**, **AWS** Cognito, GitHub Actions, Webpack, ESLint, **Jest**, **Testing Tools**, NPM, Docker, MUI, Dev Tools, SCSS, GitHub CI/CD, Monitoring, A/B Testing GenAI, nAI , Postman, Developer tools, Agile, Scrum, Sprint.
